DESCRIZIONE GENERALE

La parete, di spessore totale 51 mm, è costituita da una struttura in **estrusi di lega di alluminio 6060 UNI 9006/1** (guide a pavimento e soffitto, montanti, partenze a muro) predisposta per accogliere pannelli di chiusura in cristallo di sicurezza, pannelli speciali in vetro e legno prodotti in esclusiva e brevettati, e pannelli completamente ciechi o altri materiali monolitici a richiesta del Cliente.

Le **guide** a pavimento e soffitto ed i profili a muro consentono il perfetto livellamento della parete sia in orizzontale che in verticale e la perfetta chiusura contro i paramenti murari esistenti.

La corretta **connessione** tra i profili guida, in incroci a due o tre vie, è assicurata da raccordi angolari in alluminio, ancorati meccanicamente.

Il sistema è dotato di **profili verticali d'angolo**, fissi e variabili, ed **intermedi** in alluminio la cui funzionalità è quella di aumentare la resistenza meccanica dei pannelli nei punti di giunzione e migliorarne la chiusura.

A questi raccordi si aggiungono elementi di **connessione lineare**, a due e a tre vie in alluminio, polycarbonato e biadesivo trasparente.

Il **tipo a battente** può avere l'anta in legno, in vetro intelaiato singolo e doppio, e solo in vetro. La versione intelaiata permette l'alloggiamento di chiudiporta superiori ad incasso e ghigliottine acustiche inferiori; quella vetrata permette unicamente l'installazione del chiudiporta esterno.

Il **tipo scorrevole** è realizzabile in legno, in vetro intelaiato singolo o solo vetro filo lucido. Il corretto scorrimento è garantito da carrelli con ammortizzatore di chiusura ed apertura delle ante.

L'**anta in legno tamburato**, spessore 43 mm, è realizzata con struttura interna a nido d'ape inserita in un telaio perimetrale in legno di abete e pannelli fibrolegnosi sui due lati e rifinita con laminato HPL bordato in ABS, sp=10/10 mm.

L'**anta in vetro intelaiata**, perimetralmente presenta profili estrusi in lega di alluminio 6060 UNI 9006/1, di larghezza differenziata, e lastra interna in vetro temperato o stratificato (3+3 mm), con finitura trasparente o acidata.

Nelle ante in legno o con vetro intelaiato, le cerniere previste sono: esterne a bilico, con apertura a 180°; a scomparsa nel telaio, regolabili su tre assi, con apertura a 180°.

L'**anta in vetro** è costituita da una lastra temperata, con finitura trasparente o acidata, di spessore 10 mm. Le cerniere previste nelle ante filo lucido sono: pressofuse in alluminio con apertura a 110° o 180°; a bilico, in alluminio e acciaio, con apertura a 180°; lineari, in alluminio e acciaio, con apertura a 180°.

Gli **stipiti** delle porte ed i montanti, sono realizzati in profili estrusi di alluminio a "cannocchiale" con guarnizioni di battuta in PVC, in colore grigio RAL 9006, e permettono l'alloggiamento di eventuali cavi elettrici e l'inserimento di punti di comando a frutto singolo. In corrispondenza del punto di battuta della serratura, sono previsti controbordi in acciaio incassati nel telaio di alluminio, che garantiscono precisione di chiusura dello scrocco ed estrema robustezza.

Per consentire un adeguato **cablaggio** della parete, è previsto un **modulo tecnico** apribile in alluminio estruso (sp=51 mm) studiato per favorire l'installazione di punti luce, punti presa, termostati, sensori di allarmi ed altre apparecchiature dimensionalmente compatibili.

Le porte sono dotate di una ricca **gamma di maniglie** di serie che può essere ulteriormente incrementata grazie all'impiego di serrature con piastra universale adatte anche all'installazione di articoli fuori catalogo.

La parete è perfettamente **integrabile** con la versione a contenitore Quadra.
