

E.SILENT

**E.SILENT,
ACOUSTICS
TAKE SHAPE**

E.Silent is an acoustic solution system open to creative interpretation, transforming sound absorption into a truly expressive element of design. Through six PET collections, E.Silent offers dynamic, innovative geometries that enhance the identity of offices, restaurants, hotels and residential spaces.

The company works alongside professionals, ensuring complete creative freedom through bespoke solutions tailored to specific acoustic, dimensional and aesthetic needs, enhancing spaces with comfort, character and a contemporary identity.

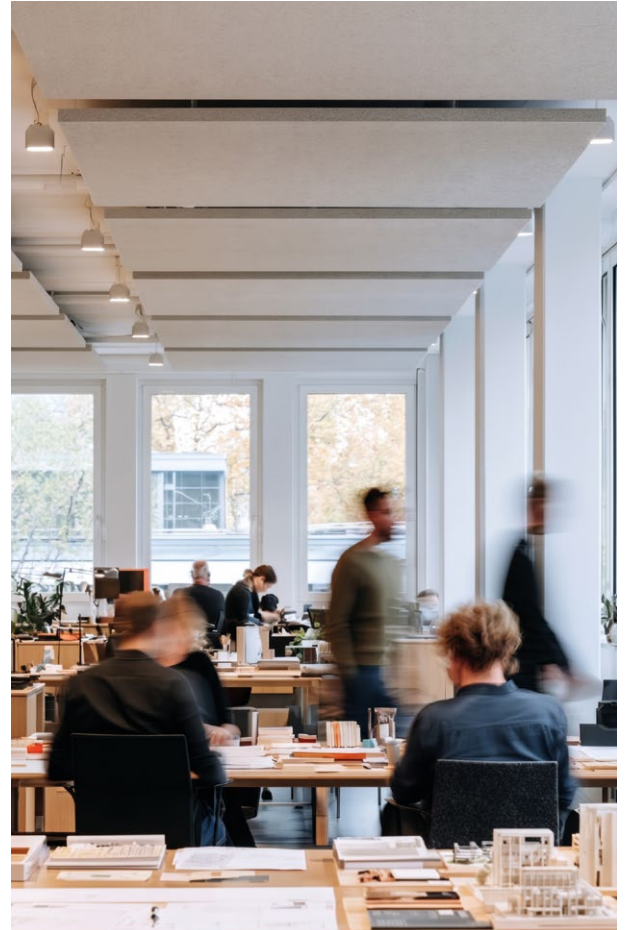

The purity of the material is combined with outstanding performance. When wall-mounted, the panel achieves an NRC of 0.45 and an α_w of 0.30, reaching 0.75–0.90 with a 50–100 mm air gap. Safe and fire-certified (Class B-s1,d0 according to EN 13501-1 and Class A according to ASTM E-84), E.Silent releases no harmful fibres and does not irritate the respiratory tract. This combination of performance and well-being makes it ideal for schools, hospitals and offices, as well as a strategic choice for projects pursuing LEED credits and WELL certification.

Behind this balance of form and well-being beats a deeply sustainable heart. The panel, just 12 mm thick and weighing 2.4 kg/m², is a mono-material made from 100% PET thermoformed felt, 60% of which comes from certified post-consumer recycled material: 8 every square metre gives new life to 53 plastic bottles. Its production process is a model of clean engineering. After the bottles are transformed into granules and spun into fibres, the fibres are mechanically interwoven and thermally pressed in an oven at 180–220 °C. This temperature allows the felt to fuse and compact naturally, completely eliminating the use of resins, chemical adhesives and formaldehyde. The result is then cut to size: a product that remains stable over time, is odourless, resistant to moisture and mould, VOC-free certified and 100% recyclable at the end of its life.

CORPORATE & OFFICE

Well-being in the workplace starts with acoustic comfort: noise is distracting and tiring.

Versatile and modular, E.Silent panels adapt to every space, helping protect concentration while furnishing interiors with style and creativity.

FOOD & HO.RE.CA

In the best restaurants, comfort is not seen - it is heard. When noise drowns out conversation, the experience loses its magic and distances grow. With E.Silent panels, design meets silence, creating the perfect setting for atmosphere and well-being.

HOTEL & LOUNGE

Hotel lobbies, lounge areas and guest rooms: spaces where hospitality becomes a sensory experience, visual comfort meets combining visual comfort with acoustic excellence.
E.Silent panels transform these spaces, delivering high acoustic performance, outstanding build quality and ease of maintenance.

INDUSTRY

In advanced production facilities, research laboratories and technology hubs, noise control is a fundamental pillar of safety, concentration and productivity.
E.Silent panels transform these spaces, delivering high acoustic performance, outstanding build quality and ease of maintenance.

OTHER SPACES

Schools, gyms, cultural and commercial spaces require acoustic solutions capable of adapting to a wide range of uses. Optimising sound absorption means improving listening quality, supporting concentration and increasing perceived well-being.

E.Silent systems integrate with architecture, offering the perfect balance of form, colour and acoustic performance.

A mosaic of visual rhythms.
Endless compositional possibilities
to give every project a unique identity.

A mosaic of colours ready to mix and match.
Choose the perfect shade to transform
acoustics into emotion.
