

E.SILENT

E.SILENT, ACOUSTICS TAKE SHAPE

E.Silent is a system of technical solutions designed to embrace creativity, transforming acoustic comfort into an expressive element of the design.

The 6 collections introduced here consist of PET panels, available in a variety of configurations, designed for wall and ceiling applications, either directly applied or suspended.

Ideal for offices, meeting rooms, bars, restaurants, hotels and residential spaces, E.Silent products enhance the acoustic quality of interiors while reinforcing their identity through innovative forms and articulated, dynamic geometries.

This catalogue offers more than just a selection of standard products: it provides a true design platform to be interpreted and developed with creative freedom in collaboration with the company. Designers can use it as a starting point for creating bespoke solutions tailored to specific acoustic, dimensional and aesthetic requirements.

E.Silent brings together design and sound absorption, offering customers a versatile tool for imagining comfortable, distinctive and contemporary spaces.

WALL /

WHERE SOUND TAKES
SHAPE
AND BECOMES
VERTICAL BALANCE.

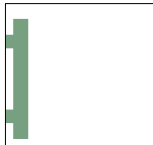

TABULA

WALL

The essence of pure form.
A sound-absorbing surface defined by neat, precise lines, revealing the texture and authentic materiality of PET.

CUSTOM

YOUR PROJECT. YOUR STYLE. YOUR COMFORT.

E.Silent was created to offer designers and creatives a versatile product, capable of interpreting specific needs and translating them into unique layouts and settings.

Shapes, dimensions, textures and patterns can be freely defined, thanks to the expertise of a specialised technical department and advanced production technologies. This flexibility expands expressive potentiality of the material, combining aesthetics and acoustic performance.

Each element can be shaped following the designer's intuition, becoming an integral part of the architecture: not simply a functional response, but a distinctive element that highlights the space and contributes to its atmosphere.

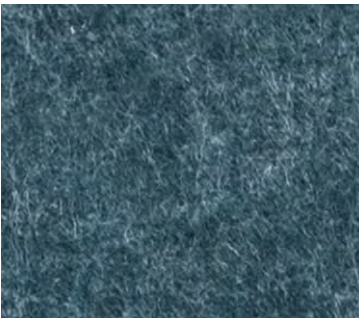

Every environment has its own identity, waiting to be heard, interpreted and transformed into matter.

E.Silent goes beyond the catalogue: it is a design tool, an open creative platform for dialogue between company, designer and client, where technique and design meet to create bespoke, high-performance configurations that reflect the character of every space.

TECHNICAL DATA

Composition

E.Silent panels are made from 100% PET (polyethylene terephthalate) thermoformed acoustic felt, 60% of which comes from certified post-consumer recycled material. Producing one square metre of panel (12 mm thick, weighing approximately 2.4 kg/m²) requires around 53 plastic bottles, each with a capacity of 0.5 litres. Designed as a recycled monomaterial, E.Silent ensures outstanding health and sustainability credentials, thanks to high-standard technical characteristics:

- **100% recyclable at end of life:** its fibres are thermally bonded without any chemical adhesives, formaldehyde or added binders.
- **Completely safe:** VOC-free certified, no hazardous fibres released and it does not irritate the skin or the respiratory tract.
- **Stable over time:** excellent dimensional stability; odourless and resistant to moisture, mould and pests.

Production

The production process begins with collecting, sorting and washing PET bottles. These are first processed into flakes and then granules through shredding, hot washing and extrusion. The resulting granules are then melted and spun into polyester fibres. This is followed by carding and spinning: recycled and virgin fibres are layered and mechanically interwoven. Finally, hot-air thermoforming at 180–220 °C melts the virgin fibres, compacting the felt to the required thickness and completely eliminating the need for resins or chemical binders. At the end of the process, the panel is cut to the desired size.

Performance

The 12-mm panel has an NRC (Noise Reduction Coefficient) of 0.45 when directly wall-mounted and an Alpha_w of 0.30 without an air gap, rising to 0.75–0.90 with a 50–100 mm air gap. It has a reaction-to-fire classification of B-s1,d0 according to EN 13501-1 and Class A according to the US standard ASTM E-84* 8228.

Applications

E.Silent is ideal for schools, hospitals and workplaces, making it the perfect choice for architectural projects requiring LEED credits and WELL certifications.

Cleaning and maintenance

E.Silent panels are water-repellent, rot-resistant and highly resistant to mould. Thanks to the thermal-bonding process, dust does not penetrate the fibres but it remains only on the surface, making cleaning quick and easy. To remove dust, simply use an electrostatic cloth or a low-power vacuum cleaner, fitted with a soft nozzle, always moving it in one single direction.

Stain removal

- **Ordinary stains:** Use a microfibre cloth lightly dampened with lukewarm water and a small quantity of neutral soap (1–2%). Gently dab the affected area, strictly avoiding rubbing in circular motions.
- **Water-based liquids and colours (coffee, soft drinks, felt-tip pens):** Act quickly (within 10 minutes). Absorb excess liquid with absorbent paper, then treat the area with a damp cloth and neutral soap. Rinse by dabbing the area with clean water only.
- **Stubborn stains (grease, oily substances, ink, food):** Blot the stain using a clean white cloth dampened with a 70% isopropyl alcohol solution.

Sanitisation and odour management

- **Odour neutralisation:** PET does not retain odours. If the panel is installed in environments such as bars or kitchens, simply airing the room is usually enough. If necessary, a light solution of water and sodium bicarbonate can be sprayed onto the surface and then vacuumed.
- **Deep disinfection (schools, hospitals):** For maximum hygiene in sensitive environments, hydrogen peroxide disinfectants or quaternary ammonium salts (at a dilution below 0.5%) can be sprayed onto the surface without rinsing.

Warnings

- To avoid compromising the integrity and acoustic performance of the panel, never use:
- Aggressive chemicals (bleach, ammonia, acetone, trichloroethylene or other solvents).
 - Abrasive tools (hard-bristle brushes, scouring pads, rough sponges).
 - Steam cleaners operating at temperatures above 80 °C or high-pressure cleaners.
 - Vigorous or circular rubbing, machine washing or immersion in water.
